Amazing Effect of EM Diatomite

EM Technology® has evolved further !

OKUTA Co., Ltd (<http://www.okuta.com>) in Japan, whose company philosophy is to provide us with "Natural Healing House", is specialized in renovation of buildings. The company also produces and sells construction materials under the name of "OK-Depot" and has developed a new product with the brand name of **EM Diatomite** together with EM Research Organization.

Diatomite consists of fossilized remains of diatoms, a type of hard-shelled algae. It is a "live" natural material with excellent function of adjusting moisture level and deodorization.

EM treated **EM Diatomite** can prevent condensation thanks to its superb function to adjust moisture/absorb excessive moisture, and thus, can suppress generation of fungi and ticks which are responsible for atopic dermatitis and asthma.

It also works as an absorbent and can absorb and deodorize the smell of tobacco/pets/harmful substance.

Since old days Japanese people have been using diatomite for portable charcoal grills as it has high resistance to fire.

Their **EM Diatomite** is easily maintained, and damages at surface can be repaired by simply spraying water.

EM Diatomite is used at their *LOHAS studio*, and tests were conducted proving anti-oxidant function of this material.

At *LOHAS studio* with **EM Diatomite** (right) and ordinary house (left), bottles of a few kinds of milk were placed to find what would happen after that. In 3 weeks' time, the milk in the *LOHAS studio* changed to cheese, and the ones in the ordinary house became rotten with foul odor and fungus.

Bottles of milk in an ordinary house

Bottles of milk in LOHAS studio

Another experiment was done to produce dried flowers from fresh flowers with the same stump. In the *LOHAS studio* fresh flowers became dry with vivid natural color ! In the ordinary house, flowers became dry as an usual kind of dried flowers. Their staff engaged in this experiment says he could not recognize the the ones in *LOHAS Studio* as "dried flowers" since the colour looked so natural.

Dried flowers in the ordinary house

In USJ, Selangor, a facility has been open under the name of **Eco Life** which adopted EM Technology and **EM Diatomite**.

At their bed rock bathing facility, you can enjoy anti-oxidant environment, and according to their staff, their health condition has improved just in a few weeks' time since they started working there !

Please visit <http://www.go-ecolife.com> to know more about them. Wide range of EM® products are available for you to purchase as well. They are planning to open many more similar facilities at everywhere in Malaysia.

Eco Life

Unit No. 1-A-C (2nd Floor), Jalan USJ 10/1A,
Pusat Perniagaan USJ 10, 47610 UEP Subang Jaya, Selangor
